

Strength to get the job done

Air Skates

Air skates are a cost-effective way of handling heavy and bulky loads with minimal maintenance costs.

Air skates are robust, low profile, high capacity load-moving modules used in sets of four or six to enable large or heavy objects to be moved with ease.

Easy to use and store

LMS Air Skate systems are easy to set up and operate. One system can be used for a variety of loads, and can be conveniently placed in the storage box provided when not in use.

Omnidirectional movement and precise positioning

LMS Air Skate systems are omnidirectional and enable precise positioning of heavy loads in tight or narrow spaces. Normal shop compressed air is used to power the system. storage box provided when not in use.

No floor wear

Modular Air Bearing Systems float heavy loads on a thin film of air virtually eliminating friction and causing no floor wear.

Features

- Working load capacities of up to 100 tonnes and higher
- Move loads in restricted areas where forklifts/cranes cannot reach
- Easy to set up with quick release couplings
- Powered by a regular workshop air supply of 5 to 7 bar
- Easy to use and cost effective
- Low floor pressures
- Modular capability giving ultimate versatility
- Accurate and repeatable positioning with omni-directional capability
- Low profile skate modules for ease of location underneath loads

How they Work

The air skates are connected with a hose manifold and supplied with compressed air. With the air turned on, the flow to each air skate is regulated to accommodate the load and floor conditions, allowing the load to be lifted clear of the floor.

- 1) 'A' refers to standard plastic support bars under the control unit. Other features are available under 'Options' below.
- 2) The modules must be placed under the load so that each one sees no more than one quarter of the full system capacity.
- 3) These figures refer to good floor conditions, i.e. power-trowelled and sealed concrete surfaces.
- 4) Cast aluminium/Extruded aluminium construction.
- 5) Supply hose ID and shut-off-valve thread size.

The Modular Air Bearing System includes:

- 4 air bearing modules
- 4 interconnection hoses with quick release couplings
- Control unit equipped with pressure regulator and gauge for each module, supply pressure gauge and plastic support bars
- 30 m supply hose including shut-off valve
- Storage box, operating instructions

Optional:

- Control unit equipped with ball casters (B), assembly brackets (C) or swivel wheels (D)
- 8 m or 10 m interconnection hose
- 50 m supply hose including shut-off valve
- Outlets for air jacks and external drive units
